

## Interactive LED Experiences

### Magic Mirror

A fully immersive virtual world with interactive elements that respond to user presence with full body tracking. Can be used to improve immersion or as a standalone experience.

### Augmented Reality Experiences

Dressing people in themed outfits, granting them superpowers, or allowing them to take memorable photos as souvenirs.

### Compact Virtual Production Setups

Allowing users to take souvenir photos with dynamic backgrounds—no green screen required. Ideal for advertisement.

### Gesture-Based Interactions

Enabling users to interact with screen content through motion, such as flipping pages or triggering different content based on age or gender. Perfect for storefronts, museums, and info walls.

### Real-Time Talking Avatars

Lifelike virtual characters designed to catch attention and guide or entertain users. It can be used for airports, banks or theme parks to create interactable characters.
